

Raising a Pedestal Chair

The Multifit Pedestal Chair Raiser expands in diameter, allowing the metal clips to hook over the edge of the chair base, holding the raiser safely to the chair.

To raise a pedestal chair, the raiser needs to fit snugly, while still allowing the chair to swivel. Please provide a photo and the measurements detailed below and email to reception@multifit.co.nz along with your quote or order number.

Placing the chair on a hard surface, take a photo at ground level of the base of the chair.

What is the measurement (in mm) from the ground to where the clips need to fit?

On some chairs there is a fixed disc underneath the base, while others have just the base. If just a base (no disc underneath) and it is sloping, provide the outer measurement.

What is the diameter (in mm) of the base of the chair?
