If you have a Felton type shower mixer : This attachment will fit straight on.

If you don't have a Felton brand : replacing the existing mixer with a felton is not that expensive and will still be half the price of lowering the plumbing, and replacing the shower linings.

Installation instructions

1/. Check to see if the shower mixer is a Felton type. If it is not, replace it with a felton type. This is still way more cost effective than lowering the existing mixer and replacing the shower linings.

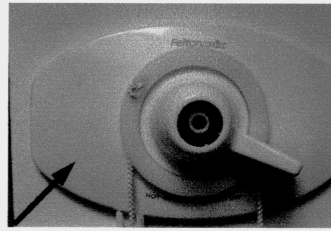

Felton shower mixers have a very good flow and as a side benefit your client will receive a better shower.

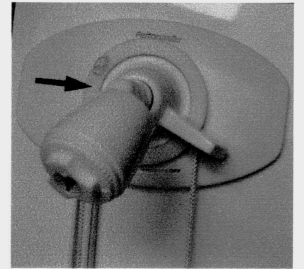

2/. Remove the existing shower rose by turning it anticlockwise until it comes out

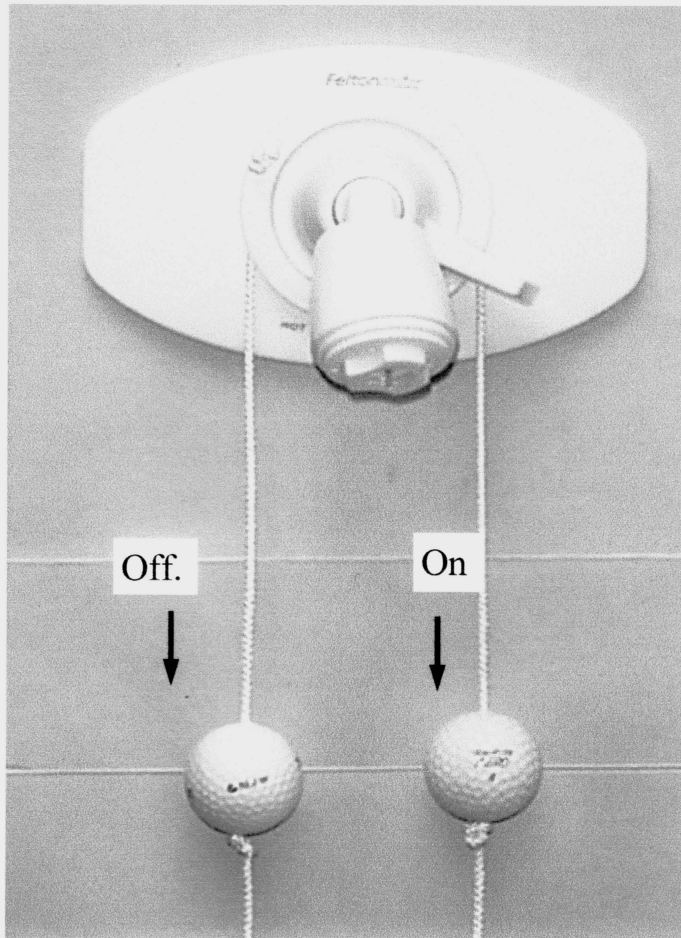

3/. Remove the shower on / off lever by pulling it towards you .

4/. Replace the shower on / off lever with the one in the kit. Make sure the knot is in the position as above

5/. Replace the rose by screwing in clockwise.

6/. Extend the braided cord down and adjust the knots below the two balls to a height that suits. Now when you pull down on the right hand ball the shower turns on, pull on the left one and the shower turns off.

No plumbing required and installs in minutes
